Why Reload? Just Shoot!

There are various high capacity solutions for the shotgun, but the **XRAIL System** is the only one that is NOT a gun (*which means you still have the dependability of the gun you are currently using with the benefit of doubling its capacity or more*), has the versatility to be used on more than one shotgun, and keeps the gun length shorter than using traditional extension tubes.

Roth Concept Innovations, LLC

XRAIL Systems

About Us

Roth Concept Innovations, LLC ("RCI") is the ONLY manufacturer of the XRAIL System: shotgun accessories that are versatile enough to use one unit on more than one shotgun, gives capacity up to 23 rounds, and does not alter the original gun. From military and law enforcement to competitive shooting, if you need extra rounds in your shotgun, the XRAIL System is the solution.

Our Mission: To provide the best high capacity solution for your shotgun that is easy to use and installs in minutes.

What is it?

XRAIL Systems are Xtreme Roth Auto Indexing Loader for shotguns. It is a magazine extension system that will allow a shotgun to have extra usable rounds of ammunition. An XRAIL System loads the same way you would normally load your gun. Once the main tube is full, you rotate the XRAIL System to the next auxiliary tube and repeat. When shooting, the tubes will automatically rotate back to the main tube as the ammunition is unloaded.

XRAIL Systems and all RCI products are made in USA.
